_____

NCX Overview — The National Carrier Exchange (NCX) is a **_free_** nationwide Dispatch, Tracking, Operations and Management platform for Freight Carriers. NCX provides numerous functions to help increase Carrier efficiency, including continuous tracking of the exact locations of all their trucks, scheduling and assigning work electronically to drivers, monitoring loads from pickup to delivery and much more. Carriers using NCX can improve customer service to their clients by providing free tracking numbers to Shippers and Receivers. Instant Proof of Delivery is also provided through photos of the signed Bill of Lading. NCX's Instant Proof of Delivery enables Shippers to invoice their customers more rapidly, accelerating their own cash cycle.

Company Background:

- NCX was founded in 2014 in Los Angeles, CA.

- Founded by Industry experts in the Shipping and Technology space for over 15 years.

- NCX provides Full-Featured Fleet Management, Dispatch and Operations tools, including a Dispatcher Dashboard, live minute-by-minute Truck Tracking, a Load Planning Calendar, Electronic Invoicing and Instant Delivery Confirmation.

- The NCX Android Mobile App for Drivers is currently available in the Google Play Store (over 90% of Truck Drivers use Android devices).

- In Q2 2016, NCX will also be releasing an iPhone/iPad version of the Driver App.

Mission Statement:

NCX's mission is to eliminate constant interruptions and wasteful phone calls in order to free up Fleet Dispatchers' precious time. NCX allows Motor Carrier Dispatchers to manage their entire fleet through a comprehensive Web platform and free mobile apps for Drivers. With NCX, Carriers can spend fewer hours chasing after their fleet – and more on growing the business.

The National Carrier Exchange Difference

- **Full Location Awareness -** gives Carrier Managers and Dispatchers ability to instantly see the location and status of all of the company's Drivers, at any given time, on a live map display that updates as they travel. No need to constantly call Drivers to check on their location or status, or to pay for expensive GPS tracking systems to be installed in each truck.

- **Free Tracking Numbers -** generated for each load being hauled that can be provided to customers, allowing them to know the exact location of the incoming truck at any time. No more customers constantly calling to ask where their truck is!

- **Instant Delivery Confirmation** - allowing Carriers to instantly send a copy of the proof of delivery out to their customer or factor. Get paid that much faster!

- **Load Calendar** - that allows Dispatchers and Managers to plan out and schedule work weeks or even months in advance for each of their Drivers.

- **Electronic Invoicing -** allowing Carriers to keep a chart of accounts and generate professional-looking invoices for their clients. By tracking expenses and income online, Carriers can get real insight into their bottom line.

- **Carrier Adoption -** NCX can be used by any size Carrier, from single Owner-Operators on up to large Carriers with hundreds of trucks on the road. It is free for everyone to use, regardless of their size!

- **Saves Money -** Carriers can use **_all_** of NCX's features for free – unlike other Tracking software companies that charge fees for just one benefit, like Tracking.

- **Growing Businesses -** Carriers can use NCX to run and grow their business. All of the features and benefits of the NCX platform make it a powerful daily workflow tool.

- **NCX Users** - Are two distinct groups of people – *Dispatchers* and *Company Drivers*. Dispatchers access and use NCX from desktops directly over the Internet using any Web Browser, while the Drivers use a free dedicated App on their mobile phones, through which they receive load assignments and submit progress updates on their daily tasks.
